Education

Sardar Patel Institute of Technology (SPIT) — Mumbai, Maharashtra
Master of Computer Applications, ***8.36 CGPA*** — *2025 - 2027*

Savitribai Phule Pune University — Pune, Maharashtra
Bachelor of Science in Physics — *2021 - 2024*

Experience

Data Analyst Intern — June 2026 – Aug 2026
Bluestock Fintech — *Pune*

- Developed a robust **ETL data pipeline** using Python (**Pandas, SQLAlchemy**) to clean and load 10+ datasets into a SQLite database; integrated the mfapi.in **REST API** to automate live NAV data ingestion for real-time fund tracking.
- Processed and benchmarked 40 mutual funds by utilizing **Pandas** and **NumPy** to resolve missing data anomalies, and **Matplotlib/Seaborn** to model statistical summaries
- Designed interactive **Power BI dashboards** to visualize mutual fund performance, utilizing custom DAX measures, cross-filtering, and drill-through capabilities to translate raw financial data into actionable insights.

Projects

Drishya Vaani | *OpenCV, WebRTC, MediaPipe, FastAPI, WebSocket, python* — Dec. 2025 - Present

- Built an end-to-end ISL gesture classification pipeline using **MediaPipe** Hands to extract 252-dimensional hand landmark feature vectors; trained a scikit-learn Pipeline (**PCA → StandardScaler → SVM**) on a custom-curated dataset achieving **95%+ validation accuracy**.
- Architected a dual-channel **FastAPI WebSocket signaling server** for **SDP/ICE relay** and **real-time translation**, enabling **P2P WebRTC video calls** across **symmetric NAT** using **STUN/TURN**.
- Designed a **4 FPS real-time frame analysis pipeline** using **OpenCV** decoding; served async ML inference via **FastAPI/Uvicorn** with **API-key authentication**, CORS, and payload guards.

VittSaathi | *Spring Boot, Java, LangGraph, PostgreSQL, Docker* — June 2026 - Present

- Engineered a full-stack fintech application with **React** and **Spring Boot 3** REST API; implemented end-to-end **JWT authentication**, **Redis-backed caching**, **Docker containerization**, and version-controlled PostgreSQL.
- Engineered a **stateful, multi-agent financial advisory system** leveraging **LangGraph** and the **Gemini API** as a **Python microservice**; orchestrated cyclic workflows between **3 specialized agents** (Sentinel, Kalpa, Drishti) using a shared **StateGraph** for accurate, multi-step financial reasoning.
- Developed a vector-based **RAG (Retrieval-Augmented Generation)** system to provide the Gemini LLM with long-term memory and real-time access to private user data, ensuring secure, context-aware financial simulations.

Technical Skills

- **Languages:** Java, C++, Python, SQL
- **Frameworks:** Spring Boot, REST APIs
- **Libraries:** Pandas, NumPy, Matplotlib, Plotly
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Developer Tools:** Power BI, Git, GitHub, Docker, Automation Anywhere (RPA)
- **Concepts:** DBMS, OOP, DSA, RBAC, JWT Authentication, Operating Systems

Achievements

- Secured **AIR 100** with a **99.68 percentile** among 39,000+ appearing students in **MAH MCA CET 2025**.
